About Scopus Author Identifier

Author last name "Abas" , Author first name "Farida"

Edit

The Scopus Author Identifier assigns a unique number to groups of documents written by the same author via an algorithm that matches authorship based on a certain criteria. If a document cannot be confidently matched with an author identifier, it is grouped separately. In this case, you may see more than one entry for the same author.

Journal Metrics in Scopus

Scopus gives four types of quality measure for each title; those are *h*-Index, CiteScore, SJR (SCImago Journal Rank) and SNIP (Source Normalized Impact per Paper).

1. CiteScore
2. SCImago Journal Rank (SJR)
3. Source Normalized Impact per Paper (SNIP)

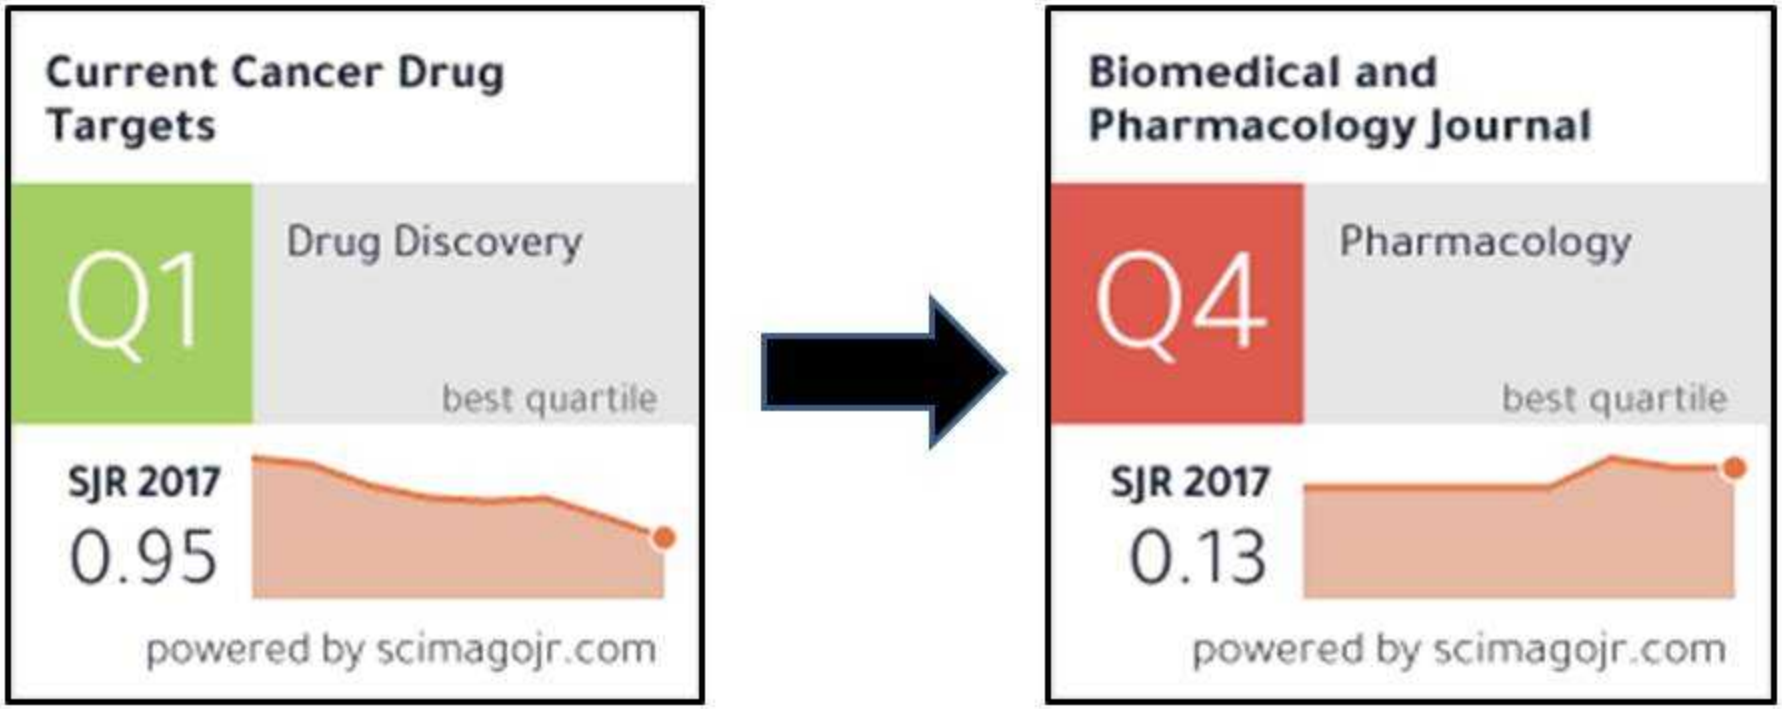
Quartile Rankings

Quartile rankings are derived from journal impact factor/journal metrics data and journals are ranked within a subject category.



Quartile Rankings

- **Quartile 1 (Q1) is applied to the top 25% ranking journals in a particular subject category**
- **Quartile 2 (Q2) is applied to journals whose rankings place them in the next 25%-50%**
- **Quartile 3(Q3) is applied to those journals whose rankings place them in the 50%-75% distribution**
- **Quartile 4 (Q4), the lowest position, is applied to those journals whose rankings place them in the bottom 25% distribution.**

False impact factors

- Some companies are producing false impact factors.
- According to an article published in the United States National Library of Medicine, these includes:

1. **Global Impact Factor (GIF),**
2. **Citefactor,**
3. **Universal Impact Factor (UIF)**
4. **Index Copernicus (IC)**
5. **Others (see the list)**
